How do you apply the Green Dot rates?

General rules:

- 1 All packaging elements must be declared based on their material category.

Examples:

- Jam packaged in a glass jar with a label and a lid. The jar must be declared at the 'glass 001' rate, the label at 'paper-cardboard 002' and the lid at 'steel 003'.
- Smartphone packaged in a cardboard box. The cardboard box should be declared as 'paper-cardboard 002'. The charger and the earphones are each in a separate PE-bag with a paper label. These bags should be declared in the 'PE films 011-07' category, the two labels in the 'paper-cardboard 002' category.

- 2 Distinction between **hard** and **soft** packaging.

- a. **Hard or rigid packaging** will automatically return to its original shape after buckling. This includes bottles, flasks, containers, pots, trays and other blow-moulded or injection moulded plastic packaging. Hard packaging is usually comprised of dimensionally stable packaging which may or may not be combined with various packaging elements which can be separated from the actual packaging (e.g. label, cap, lid, sealing foil).
- b. **Soft or flexible packaging** is not rigid and buckles easily. It includes sacks, bags, envelopes, stand-up pouches, removable sealing films, wrappers and similar flexible packaging articles. Soft or flexible packaging consists of one or more layers made of a variety of materials, including plastic film, paper, aluminium or a combination of these. The construction may be unprinted, printed, coated and/or laminated.

- 3 Distinction is made between **transparent** versus **opaque** PET-packaging.

- a. With transparent PET packaging, its content is clearly visible through the material.
- b. With non-transparent or opaque PET-packaging, its content is not or barely visible through the material

- 4 Distinction between **colourless** versus **coloured** transparent PET-bottles and flasks.

- a. Most transparent PET-bottles and flasks are colourless which means that they have not been coloured, eg by adding a colouring pigment
- b. The coloured transparent PET-bottles and flasks were coloured by the producer, eg by adding a colouring pigment. The transparent coloured PET-bottles are split in blue, green or other colours. The colour of the PET-bottle is best seen at the injection point (at the bottom of the bottle) or in the neck (on which the closures fit)

- 5 The "**Hazardous Household Waste**" rate applies to the following household packaging that has to be sorted as HHW after use: :

- Packaging of paints, lacquers and varnishes
- Packaging of glues, silicones and resins
- Packaging of lubricating oils, fuels, engine oils and mineral oils
- Pesticide packaging (herbicides, insecticides, fungicides, ...)
- Disposable gas cylinders and metal aerosols, except for aerosols for cosmetics or food
- Packaging with compulsory child-resistant closure (CRC)

- Packaging with (one of) below CLP-hazard symbols:

Nevertheless, these packaging must be declared according to the correct material categories.

- 6 The “**obstructive packaging**” rate applies to the following household packaging that obstruct the selective collection, sorting and / or recycling:
- a. Plastic cans with metal bottom or top
 - b. Plastic bottles that are at least 75% covered by a sleeve (or 50% for bottles <50cl), if it consists of a material different from the bottle and is not perforated
 - c. Laminated plastic packaging with aluminium film, for eg beverages, fruit and vegetables, prepared dishes, pet food, maintenance products and body care
 - d. Oxo degradable packaging
 - e. Laminated cardboard packaging of chips and milk powders, insofar as they contain less than 85% paper fibre.

Nevertheless, these packaging must be declared according to the correct material categories.

Companies that can demonstrate what efforts they will make to make this packaging better sortable and / or recyclable are exempted from paying this obstructive packaging rate for 2 years and fall back on the rate of the respective materials. Please contact Fost Plus in advance.
